

Solid hot tub Ranges

Key Information guide

1. Minimum dimensions for delivery:

Height:

SKYE

1.9 metres

ISLA

2.1 metres

Width:

73 cm

73 cm

Parking:

We require a space to park directly outside the premises, as close to the setup location as is possible, with flat level access where possible. We can negotiate some steps but no more than a few.

In order to ensure safe installations, we require a short video from the kerbside to your setup location. This is imperative for risk assessment processes, failure to provide this and our delivery team deems this unsafe then hires are chargeable.

2. Maximum length from Electrical Point Access to Set up location is 12 metres

3. Recommended setup and Heating Process:

We recommend booking delivery for the day prior to preferred usage this is to ensure that the tub has adequate time to heat, this tub takes approximately 12 hours but this can be decreased by incorporating hot water.

4. Water Access / Emptying Process:

We provide pre-treated 10-metre hoses for filling and we require access to both cold and hot water where available. For the emptying process, you can use any garden hose, if you do not have access to a garden hose then we can provide one.
